P530/1 BIOLOGY (Theory)

Paper 1

Jul/ Aug 2023

2 ½ hours

TORORO ARCHDIOCESE EXAMINATIONS BOARD

Uganda Advanced Certificate of Education MOCK EXAMINATIONS 2023

BIOLOGY (THEORY)

Paper 1

2 hours 30 minutes.

INSTRUCTIONS TO CANDIDATES.

This paper consists of sections A and B.

Answer all questions in both sections.

Write answers To section A in boxes provided and answers to Section B in the spaces provided.

No additional sheets of paper should be inserted in this booklet.

SECTION A (40 MARKS)

Write the letter corresponding to the right answer in the box provided. Each question in this section carries one mark.

1.	Δ 7νοι	ote with three copies of chromosome 21 is known	n to manifest sympton	ns of
1.	A.	Sickle cell anaemia		
	В.	Klinefelter's syndrome		
	C. D.	Turner's syndrome Down's syndrome		
	D.	Down's syndrome		
2.	Which	one of the following is the role of cholesterol in	a plasma membrane?	
	A.	Reduces escape or entry of non-polar molecules	and the second	
	B. 1	Reduces escape or entry of polar molecules		
	C.	Reduce escape or entry of organic molecules		
	D.	Prevents drying up of the membrane		
	2.	The court and make at one memory		
3.	Whic	h of the following ia an example of positive feedb	eack?	
	A.	Regulation of glucose.	r	
	В.	End product inhibition		
	C.	Secretion of oxytocin during labour		1
	D.	Regulation in concentration of thyroxine in bloo	od	
		n executed a		
4.		phenotype resulting from a cross between pink of		
	locus	ts depends on which locusts is pink eyed. This r	neans that the gene fo	r eye
	color	r is.		
	A.	sex determined	Г	
	B.	sex linked	TO BE THE STATE OF	
	C.	sex limited	154	
	D.	epistatic	y .	
5.	Since	e the formation of sperms requires a temperature b	clow the body temperat	ure,
	A.	the testes lie in scrotal sacs.		
	B.	more water intake is advised for mature males	10	
	C.	scrotal sac are pouch-like hanging extensions		
	D.	scrotal sacs are between the thighs		

6.	Whic	h one of the following leads to an influx of water in a freshwater telec	ost?
	A. B. C. D.	Many, large glomeruli and salt reabsorption from the renal fluid. Many, small glomeruli and salt extrusion from the body Few, large glomeruli and salt uptake Many, small glomeruli and salt uptake	
7.	Why	are certain exotic species considered "invasive"? They	
	A. B. C. D.	are found in areas where they are not native. were introduced by humans – often accidentally. spread aggressively and displace native species. benefit from being in a new environment.	
8.	Which negat	ch of the following changes in a cell is true as its water potential becomive?	mes less
	A. B. C. D.	Decrease in turgor pressure Decrease in osmotic potential Increase in solute potential Decrease in pressure potential	
9.	The iboth;	major similarity between active transport and facilitated diffusion is	s that in
	A. B. C. D.	energy is used materials are transported against a concentration gradient carrier proteins are involved movement of polar molecules is involved.	
10.	Whice concerns A. B. C. D.	ch one of the following would be a result of increased carbon entration in tissues? Increase in affinity for oxygen by haemoglobin Increase in the loading tendency of haemoglobin Lowering of affinity for Oxygen by haemoglobin Shifting of the oxygen dissociation curve to the left.	dioxide
11.	Whice source	ch one of the following justifies the statement that "mutation is the e of variability"?	ultimate
	A B. C. D.	DNA polymerase is remarkably accurate "Mutation proposes and selection disposes" Mutation is the only source of new alleles Mutation occurs in response to natural selection	

12.	At w	hat stage of cell division would the cell stop when colonicines is added?	
	A.	Metaphase	
	В.	Anaphase	
	C.	Prophase	
	D.	Telophase	
13.	When	a lipid is combined with a phosphate group, it becomes	
	A.	saturated.	
	B.	water soluble.	
	C.	amphipathic.	
	D.	amphoteric.	
14.	Which	h one of the following has the greatest biomass?	
	A.	Primary consumers	
	В.	Secondary producers	İ
	C.	Primary producers	
	D.	Tertiary consumers	
		profit in the second in the se	
15.	Which	h one of the following is the major role of T - helper cells in cell med	diated
	respon		
	A.	Stimulation of B cells to make antibodies	
	B.	Suppress activity of other T cells	
	C.	Helps to kill body cells infected by viruses	
	D.	Gradually destroy transplanted organs	
		e grade the second of the seco	
16.	The r	respiratory pigment found in some arthropods is.	
	A.	haemoerythrin	
	B.	haemoglobin	
	C.	chlorocruorin	
	D.	haemocyanin	
17.	Whic	ch one of the following determines the biological role of proteins?	
	A.	Sequence of amino acids in them	
	В.	Pattern of folding of the polypeptide chain	
	C.	Other organic molecules with which it is associated	
	D.	The specific three dimensional shape	

18.	To which kingdom do multicellular, nucleated heterotrophs that always obtain food by absorbing nutrients from the environment?					
	A.	Plantae				
	В.	Fungi				
	C.	Monera				
	D.	Animalia				
19.	In wh	hich part of the chloroplast are complex carbohydrates are made?				
	A.	Internmembrane space				
	В.	Stroma				
	C.	Inner membrane				
	D.	Thylakoid				
20.	Whic	ch of the following polysaccharides contain amino acid group?				
		furein				
	B. Ce	ellulose	- September 1			
	C. Cl	hitin				
	D. G	Blycogen				
21.	Skin	n colour is an example of inheritance through.				
	A.	Systematic genes				
	В.	Polygenes				
	C.	Sex linkage				
	D.	Multiple alleles				
22.	Whic	ch of the following is not a role of the larval stage in animal development	?			
	A.	Dispersion				
	В.	Feeding				
	C.	Asexual reproduction				
	D.	Sexual reproduction.				
23.	Whic	ch of the following occurs at the maximum ventricular pressure?				
	A.	Semilunar valves close while atrioventricular valves open				
	В.	Both semilunar valves and artiventricular valves open				
	C.	Both semilunar valves and atrioventricular valves close				
	D.	Semilunar valves open while atrioventricular valves close				

24.	A ce	ertain gene of a bacterium codes for a protein; 40 amino acids leotides are needed to code for this polypeptide?	iong. 11	ow many
	A.	40		
	В.	80		
	C.	120		
	D.	1600		
25.	In whitheir	which of the following responses do auxins and gibberellins short roles?	ow syne	ergism in
	A.	Fruit growth		
	В.	Root growth		
	C.	Apical dominance		
	D.	Stomatal opening		
26.	The	e "lub" sound is produced after the;		
	A.	ventricles are fully contracted		
	В.	bicuspid and tricuspid valves suddenly close.		
	C.	semilunar valves are closed		
	D.	ventricles start to relax		
27.	The	e association of white egrets with herds of cattle can be describe	d as .	
	A.	Mutualism		
	В.	Commensalism		
	C.	Parasitism	Г	
	D.	Co - evolution		
28.	In w	which of the following processes is osmosis least involved?		
	A.	I and distance transport of		ļ
	В.	Long distance transport of xylem sap		
	C.	Swelling of guard cells		
	D.	root pressure		
	<i>D</i> .	Water movement between neighbouring cells of the root cort	.ex	
29.	Whi	ich of the following blood proteins becomes the threads of a clo	ot?	
	A.	Prothrombin		
	В.	Thromboplastin		
	C.	Thrombin		
	D.	Fibrinogen	L	

30.		synthesis coincide?	id the action spectrum for
	A. B.	Photosystems I and II are activated by different v Wavelengths of light that are absorbed by chloro	
	D.	capturing reactions.	phyli trigger nght
	C.	Energy from wavelengths absorbed by carotenoichlorophyll.	ds is passed on to
	D. ,	The rate of photosynthesis depends on the amour	nt of light received.
31.		h one of the following is the significance of the rac n germination?	lical to emerge as a first
	step ii	in germination?	
	A.	Its hoot protects the shoot that emerges later	
	B.	It carries out photosynthesis to supply the embryo	o with food.
	C.	It establishes a supply of water to the growing en	nbryo
	D.	It is necessary to break the seed coat	
		radinal kao kulimba bija kuko ka jiba bara kao kita	
32.	Durin	ng an action potential in a neuron,	gar Asia - Asia - Asia Ngarata - Ma
	A.	Potassium ions diffuse into the axon	1 4 .4
	B.	Sodium ions diffuse out of the axon	i ne'r ee'd i i
	C.	Sodium ions diffuse into the axon	
	D.	Both the sodium and potassium ions diffuse into	the axon
33.	Whic	ch one of the following would be the effect injecting	thyroxine into a
		atory mammal?	5 41.7 - 0.1.1.10
			()
	A.	Increase in oxygen consumption	1 . (
	B.	Decrease in metabolic rate	- 11 %
	C	Increase conversion of glucose into glycogen	
	D.	Thyroid gland becomes more active.	
34.	Produ	uction of hypertonic urine is mainly due to high lev	rels of:
	A.	Aldosterone	400
	В.	Vasopressin	100
	C.	A dranaling	D. Insulin
		· · · · · · · · · · · · · · · · · · ·	J. IIISUIIII

35.	In wh	nich of the following areas is to be found?	columnar epithelium with microvilli is	most
	A. B C.	Colon Duodenum IIeum		
	D.	Stomach		
36.	Whic	h of the following are reabso	orbed in the Malphian tubules excretion	in
	insect	s?	good a section of the section of	
	A. B.	KHU, carbon dioxide and K^+ and Na^+	water	
	C. D.	KHC ₃ , water and carbon did KHU, water and KHCO ₃	oxide	
37.	The s	streamlined shape of a shark,	penguin and whale is an example of:	
	A.	Convergent evolution	e i ja se saki sakaj najgoj ja serodo	
	B.	Divergent evolution	•	
	C.	Parallel evolution		
	D.	Co- evolution		
38.	Whic	ch of the following summariz	es Mendel's law of segregation?	
	Α.	Dains of factors are inhanita	d independent of seals of the	
	B.	The two homologous chron	d independent of each other. nosomes with a pair of genes and end up)
	0	separately.		
	C. D.		parate at the spindle equatorial region osome are never found in the same gam	ete.
39.		e code for an amino acid is A molecule may be written as:	TG on DNA molecule this code on the t	ransfer
	A.	TAC		
	B.	UAC.		
	C.,	AUG	D. GUC	

40.	Wh uter	Thich one of the following would take place afte erine wall of a human female?	r implantation of a zygote in the
	A.	Breakdown of the endometrium	
	B.	Development of ovarian follicles	
	C.	Continued development of the corpus luteur	m
	D.	Increased secretion of luteinizing hormone.	
		SECTION B (60 MARKS	5)
41.	(a)	Viruses are considered to be at the boundary suggest why they are considered.	of living and non-living
